

Created bucket named "pjsbucketworld"

Set the bucket to be a static S3 website host (**Link does not work anymore**).

Link: <http://pjsbucketworld.s3-website-us-east-1.amazonaws.com/>

Might take the bucket offline soon due to possible costs.

Created index.html document using Notepad++

Messed with HTML to insert my resume into it.

Final product so far and proof of concept.

Might add more to the page later if I decide to make this an actual website of mine.

Currently trying to get AWS CloudFront to work with it but having trouble.
